Priya Raman
Backend Engineer
priya.raman@example.com | Austin, TX

Summary
Backend engineer with six years of experience building payment and booking services. I write Go and PostgreSQL every day, I have carried a pager for four years, and I like services that are boring to run.

Experience
Senior Backend Engineer, Fintech startup (2022 to now)
- Built the Go service that moves money between customer wallets, handling about 40,000 payments a day.
- Designed idempotent payment APIs so a retried request can never charge twice.
- Tuned PostgreSQL queries and indexes, cutting p95 latency from 900 ms to 120 ms.
- On the on-call rotation, and wrote the runbooks for our three most common incidents.

Backend Engineer, Travel booking company (2019 to 2022)
- Wrote booking and refund services in Go, backed by PostgreSQL.
- Moved our services from virtual machines to AWS ECS with Terraform.
- Mentored two junior engineers through their first on-call shifts.

Skills
Go, PostgreSQL, Redis, AWS (ECS, RDS, SQS), Terraform, Docker, gRPC, on-call and incident response.
I have deployed to Kubernetes in staging, but I have not run production Kubernetes clusters.

Education
B.S. Computer Science, 2019
